Work Experience

Name of Employer	**:**	**Global Logic**
Dates of Employment	**:**	**October 2013 – Present moment**
Job Title	**:**	**Senior Java Software Engineer**

Project Name: Ericsson Adaptive Inventory - OSS/BSS
Project Description: Ericsson Adaptive Inventory (known as Granite) is a system for planning, designing and documenting complex communication services and networks. The system serves as the database of record across all operational layers and technologies, and couples it with a real-time data visualization and provisioning automation.
Duration: March 2014 – present moment
Responsibilities:
- Implementation business and functional requirements
- Bug fixing
- Interaction with the customer and QA team
- Code review

Project Name: Ericsson BPM
Project Description: Wireless and wire line Inventory System that stores and customizes all the physical and logical resources and manages its networks and services. It is designed to enable intelligent automation of network design and assign processes, as well as support provisioning tasks. It supports all data and voice technologies, and serves the needs of a vast variety of Communications Service Provider.
Duration: October 2013 - March 2014
Responsibilities:

- Implementation business and functional requirements
- Bug fixing
- Interaction with the customer and QA team
- Code review

Name of Employer	:	**Samsung Research and Development Center**
Dates of Employment	:	**December 2011 – September 2013**
Job Title	:	**Java Software Engineer**

Project description: Development of IDE for Smart TV
Responsibilities:

- Analysis of technical requirement for the system
- Implementation of a new functionality
- Project implementation from the scratch
- Maintenance and troubleshooting of the system
- DB design, administration and development
- Unit tests implementation

Academic Record

Name of institution: **Taras Shevchenko National University of Kiev, Faculty of Cybernetics, Software engineering full-time department**
